

Bald Eagle

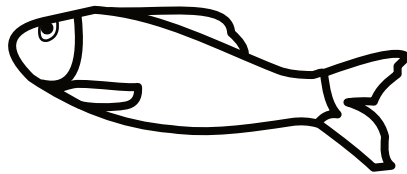

Scientific Name: *Haliaeetus leucocephalus*

Size: 2.5 to 3 feet in height

Lifespan: 20-30 years

Coloring: Juveniles are brown, with occasional white markings on the undersides of their wings and chest. As they get older, the bill turns from dark brownish-black to yellow and the head and tail turn white.

Diet: Love fish, but are opportunistic. When fish aren't available they'll eat whatever they can catch, including small birds and rodents.

Over time, an eagle's nest can be six feet across and six feet high, and can weigh over a ton.
