Watershed Warrior

What is a watershed?

It's a land area that channels rainfall and snowmelt to creeks, streams, and rivers, and eventually to outflow points such as reservoirs, bays, and the ocean.

Why are watersheds important?

Healthy watersheds protect water quality and benefit the community. We all live in a watershed, and watershed condition is important to everyone and everything that uses and needs water.

Get informed!

Interested to see the condition of your local watershed? Visit the "How's My Waterway" website by scanning the QR code and entering your information.

Make a difference!

Think of some things you can do to make a difference, like:

Conserve water every day. Take shorter showers, fix leaks and turn off the water when not in use.

Use hardy or native plants that require little or no watering, fertilizers or pesticides in your yard.

Recycle yard waste in a compost pile and use a mulching mower or leave the leaves where you can.

What are some other ways to protect our watersheds?
